

Lab Logical Topology

Lab Server Details

Role	Hostname	Operating System	RAM	Storage	IP Address
Puppet Master	puppetmaster	CentOS 6.5	2 GB	20 GB	172.31.0.201/16
MediaWiki	wiki	CentOS 6.5	2 GB	20 GB	172.31.0.202/16
MediaWiki	wikitest	Ubuntu 14.04.1 LTS	2 GB	20 GB	172.31.0.203/16
Administrator server	winadmin	Windows 2008 R2	2 GB	40 GB	172.31.0.204/16

Quick Overview of Installation Steps:

- Install Virtual Box(<https://www.virtualbox.org/>)
- Install Vagrant(<https://www.vagrantup.com/>)
- Download centos and Ubuntu Boxes

Downloading centos and Ubuntu:

Refer <https://github.com/vasu34k123/Puppet>

Booting Puppet Master:

Adding CentOS BOX to vagrant:

Cd puppet-fundamentals-lab

Vagrant box add centos65-base ventos65.box

Once done issue following commands:

Cd puppetmaster

Vagrant up

Vagrant ssh

For modifying configuration files and for version controlling, we need editor tool and GIT.

Sudo yum -y install nano git ntp

Sudo service ntpd start

Sudo chkconfig ntpd on

Chkconfig | grep ntpd

Note: vagrant box list for finding box list.

If config for testing Ethernet.

Installing puppet master:

Involves 2 tasks.

Task 1) Add puppet repo: for finding puppet binaries

Task 2) Install puppet server

Task 1 → sudo yum -y install <http://yum.puppetlabs.com/puppetlabs-release-el-6-noarch.rpm>

Task 2 → sudo yum -y install puppet-server

Chk the installation using following command:

Puppet master --version

Setting Up Directory Environment:

Puppet programs are stored in files called manifests.

Puppet loads site manifest by default (/etc/puppet/manifests/site.pp)

Directory Environments allow you to maintain test, development and production environments separately in puppet master.

We can control the environments from below location
/etc/puppet/environments/production/environment.conf

Puppet configuration file: contains below components

Contains three sections

Master

Agent

Main

Issue following commands:

```
[vagrant@puppetmaster ~]$ sudo mkdir -p /etc/puppet/environments/production/{modules,manifests}
```

Cd /etc/puppet/environments/production/
Sudo nano environment.conf

Add below lines in .conf file:

Modulepath = /etc/puppet/environments/production/modules
Environment_timeout = 5s

Cd /etc/puppet
Sudo nano puppet.conf

Under [main]:

Add below line.

dns_alt_names = puppet,puppetmaster,puppetmaster.srini.com

[master]

Environmentpath = \$confdir/environments
Basemodulepath = \$confdir/modules:/opt/puppet/share/modules

PUPPET MASTER SECURITY:

SELINUX:

Sudo setenforce permissive

Sudo sed -i 's\=enforcing\=permissive\g' /etc/sysconfig/selinux

Sudo getenforce

Puppet Master SSL certificates:

Sudo puppet master --verbose --no-daemonize

```
Info: Creating a new SSL key for ca
Info: Creating a new SSL certificate request for ca
Info: Certificate Request fingerprint (SHA256): 7D:95:FC:4D:B1:EE:3E:C9:61:BB:D2:13:53:B6:29:B5

Notice: puppetmaster has a waiting certificate request
Notice: Signed certificate request for puppetmaster
Notice: Removing file Puppet::SSL::CertificateRequest puppetmaster at '/var/lib/puppet/ssl/ca/r
equests/puppetmaster.pem'
Notice: Removing file Puppet::SSL::CertificateRequest puppetmaster at '/var/lib/puppet/ssl/cert
ificate requests/puppetmaster.pem'
```

Note: Above command shld be issued only once.

Verify the cert keys using following commands:

Sudo ls -la /var/lib/puppet/ssl

IPTABLES:

We need to permit any node to
connect to the Puppet Master
on port TCP/8140

Iptables configuration is stored in /etc/sysconfig/iptables

To allow 8140 port restart your iptables:

Sudo service iptables restart

Modify iptables data .

Sudo nano /etc/sysconfig/iptables

```
GNU nano 2.0.9 File: /etc/sysconfig/iptables Modified
# Firewall configuration written by system-config-firewall
# Manual customization of this file is not recommended.
*filter
:INPUT ACCEPT [0:0]
:FORWARD ACCEPT [0:0]
:OUTPUT ACCEPT [0:0]
-A INPUT -m state --state ESTABLISHED,RELATED -j ACCEPT
-A INPUT -p icmp -j ACCEPT
-A INPUT -i lo -j ACCEPT
-A INPUT -m state --state NEW -m tcp -p tcp --dport 22 -j ACCEPT
-A INPUT -j REJECT --reject-with icmp-host-prohibited
-A FORWARD -j REJECT --reject-with icmp-host-prohibited
COMMIT
```

Modify file like below:

```
# Firewall configuration written by system-config-firewall
# Manual customization of this file is not recommended.
*filter
:INPUT ACCEPT [0:0]
:FORWARD ACCEPT [0:0]
:OUTPUT ACCEPT [0:0]
-A INPUT -m state --state ESTABLISHED,RELATED -j ACCEPT
-A INPUT -p icmp -j ACCEPT
-A INPUT -i lo -j ACCEPT
-A INPUT -m state --state NEW -m tcp -p tcp --dport 22 -j ACCEPT
-A INPUT -m state --state NEW -m tcp -p tcp --dport 8140 -j ACCEPT
-A INPUT -j REJECT --reject-with icmp-host-prohibited
-A FORWARD -j REJECT --reject-with icmp-host-prohibited
COMMIT
```

Restart ur IPtables

Sudo service iptables restart

Installing Apache and passenger:

Puppet master runs a ruby on rails application.

Apache software for listening to nodes.

Type the following command to issue the dependents:

```
[vagrant@puppetmaster puppet]$ sudo yum -y install httpd httpd-devel mod_ssl ruby-devel rubygems gcc gcc-c++ libcurl-devel openssl-devel
```

After successful installation issue below command.

Sudo gem install rack passenger

Sudo passenger-install-apache2-module

```
AllowOverride all
# MultiViews must be turned off.
Options -MultiViews
# Uncomment this if you're on Apache >= 2.4:
#Require all granted
</Directory>
</VirtualHost>

And that's it! You may also want to check the Users Guide for security and
optimization tips, troubleshooting and other useful information:

/usr/lib/ruby/gems/1.8/gems/passenger-4.0.56/doc/Users_guide_Apache.html
https://www.phusionpassenger.com/documentation/Users%20guide%20Apache.html

Enjoy Phusion Passenger, a product of Phusion (www.phusion.nl) :-)
https://www.phusionpassenger.com

Phusion Passenger is a trademark of Hongli Lai & Ninh Bui.
[vagrant@puppetmaster puppet]$ sudo mkdir -p /usr/share/puppet/rack/puppetmasterd/{public,tmp}
[vagrant@puppetmaster puppet]$ sudo cp /usr/share/puppet/ext/rack/config.ru /usr/share/puppet/
rack/puppetmasterd/
[vagrant@puppetmaster puppet]$ sudo chown puppet:puppet /usr/share/puppet/rack/puppetmasterd/c
onfig.ru
[vagrant@puppetmaster puppet]$ ls -la /usr/share/puppet/rack/puppetmasterd/config.ru
-rw-r--r--. 1 puppet puppet 1229 Dec 23 00:35 /usr/share/puppet/rack/puppetmasterd/config.ru
[vagrant@puppetmaster puppet]$
```

Download as follows for git:

```
[vagrant@puppetmaster puppet]$ sudo mkdir -p /usr/share/puppet/rack/puppetmasterd/{public,tmp}
[vagrant@puppetmaster puppet]$ sudo cp /usr/share/puppet/ext/rack/config.ru /usr/share/puppet
rack/puppetmasterd/
[vagrant@puppetmaster puppet]$ sudo chown puppet:puppet /usr/share/puppet/rack/puppetmasterd/
onfig.ru
[vagrant@puppetmaster puppet]$ ls -la /usr/share/puppet/rack/puppetmasterd/config.ru
-rw-r--r--. 1 puppet puppet 1229 Dec 23 00:35 /usr/share/puppet/rack/puppetmasterd/config.ru
